

INTRODUCTION

We automate the repetitive work. Your team keeps the decisions.

VortexDeep designs and runs AI-assisted workflows for Swiss SMEs.

PROBLEM

Simple tasks, repeated every day.

Each is easy once. The cost is that it never stops.

INCOMING · TASKS 1...N

One pair of hands. The queue only clears as fast as you do.

→ The bottleneck isn't any one task. It's that they never stop.

SOLUTION

We turn repetitive tasks into AI workflows, with a human in control.

AI-assisted workflows handle the routine steps in parallel. Your team reviews decisions and exceptions at defined control points.

INCOMING · TASKS 1...N

The workflow prepares; your team decides. Nothing consequential goes out unreviewed.

→ Start with the task costing you the most hours. Add from there.

MARKET

Small and mid-sized companies — starting in Switzerland.

Not defined by industry. By the admin that repeats every day.

MARKET SIZE · SWISS BEACHHEAD · WORKING ESTIMATES

TAM

~600k

Swiss SMEs with repetitive admin

Everyone who has the problem. Mostly micro firms; a lighter tier could open them.

SAM

~50k

small firms, 10–49 employees

The slice we can serve with this model. CHF 400–750M ARR.

SOM

30–40

managed clients by 2029

What we can realistically win. CHF 0.25–0.6M ARR · under 0.1% of SAM.

Source: SECO / FSO (STATENT 2023) for company counts. SAM and SOM are VortexDeep estimates from stated targeting and pricing assumptions.

→ Our slice is the cautious middle: AI's help, not its autonomy.

COMPETITION & ADVANTAGE

Managed automation. Human control where it matters.

Four ways to handle the repetition, each with a catch, and our fifth.

THE FOUR OPTIONS · EACH WITH A CATCH

DIY tools: cheap, but you build and maintain it.

Full autonomy: fast, but less direct oversight.

Hire: headcount cost, and still manual.

Do nothing: the cost quietly compounds every day.

→ **Built for the cautious middle: a few clients at a time, fixed scope.**

OUR FIFTH WAY

01 You approve at defined control points
nothing consequential goes out unreviewed

02 We build and run it
not a tool to learn or maintain

03 Your data stays yours
documented access, export on request

04 People not replaced
we automate the work, not the person

ROADMAP

Start narrow, prove it, then widen.

Working targets, based on current pricing and delivery assumptions.

Indicative ARR scenario, not a forecast.

→ Land one process, expand within the account. Each stage funds the next.

FINANCIAL PLAN

Priced to the scope you choose. Recurring by design.

A one-time setup funds the build; a monthly managed service is the recurring base. Five packages, priced by complexity and control.

01 Basic Intake	02 Basic+ AI Triage	03 Pro Multi-Channel	04 Managed Operations	05 Agentic Automation
Setup ~CHF 750 → 30'000 Monthly ~CHF 150 → 6'000				

ANNUAL RECURRING REVENUE · INDICATIVE SCENARIO, NOT A FORECAST · BLENDED ~CHF 8-15K PER ACTIVE CLIENT

→ Licence by default; build-transfer only in the highest tier. Break-even at ~6-8 clients on current assumptions. Bootstrap-first.

TEAM

One founder today. A hiring plan, not a wish list.

Build + Sell + Run all have to be covered. Each seat opens when revenue covers it — we hire from cashflow, not speculation.

HAVE NOW

Maciek Szczech, Founder SELL + RUN

20+ years in industrial operations, engineering, process and automation. Covers SELL and RUN today, and BUILD as far as one person can. I have sat on the customer's side of exactly the admin queue we automate.

STILL MISSING · EACH SEAT OPENS WHEN ITS TRIGGER IS MET

01 Technical co-founder BUILD

Architecture, integrations, security, reusable workflows. Equity, not salary. Trigger: the first paid pilots, 2027 — or earlier, if the right person appears. (WP2)

02 Key hire — Managed operations RUN

Onboarding, monitoring, support, reporting, improvement. Trigger: the recurring base outgrows one pair of hands, 2028.

03 Key hire — B2B solution seller SELL

Discovery with SME owners, scoping, quoting, renewals and account growth. Trigger: 15–20 clients. (WP1)

04 Bought in, not hired EXTERNAL

Legal & IP counsel, accounting / fiduciary, data protection, and marketing as a service. Fractional — not headcount.

→ Order of hiring: BUILD first, then RUN, then SELL. Sales is the function I already cover; delivery capacity breaks before demand does.

BOARD & ADVISORS

No board yet — and that's the honest answer.

Advisors fill specific gaps; a board holds me accountable. None of these seats is filled today — these are profiles, not people.

ADVISORS · SPECIFIC GAPS · LIGHT ENGAGEMENT, 2-4 H/MONTH, SMALL EQUITY WITH VESTING

01

SME / industry operator

A manufacturing or Treuhand veteran who knows the beachhead. Validates we target real pain, and opens doors.

02

AI / automation & data governance

Keeps the build credible on security, privacy and human-in-the-loop as it scales. Sanity-checks the tech.

03

DACH B2B go-to-market

Sharpens positioning and the sales motion; referrals into high-trust niches.

BOARD · LATER, WITH FUNDING · FORMAL, QUARTERLY, ACCOUNTABLE

04 Independent chair / B2B services operator

Governance, accountability and strategic challenge; someone who has scaled a Swiss services business. Finance & legal joins the board only when a raise makes it necessary — until then it is bought in (see Team).

→ Not advisors, and not listed as such: a first design-partner client. We name advisors only once they are actually engaged.

What is real today — and what still needs proof.

Pre-revenue, but not pre-proof. Three things exist right now.

01

Pilot in progress

An unpaid email-handling automation with a Swiss SME, built around a real process. Technical proof and our first reference case — not yet a paid customer case.

02

Fit Check live

A short self-check on vortexdeep.ch. The low-pressure front door that collects real data on who fits.

03

ROI on the table

We quantify a prospect's cost of doing nothing — time, errors, lost leads — against our fee. We model payback; the figure gets confirmed with the first paid client.

→ **Narrow, but real. Technical proof is done; commercial proof is next.**

THE ASK

Know a small company drowning in repetitive admin? That's exactly who we help.

Introductions to SMEs in the beachhead — ideally one design partner willing to map and test a process — and early capital to compress the timeline: earlier delivery hire, faster CH → EU. The model is built to stand on its own revenue; funding makes it faster.

Thank you.
